Flood relief scheme

Newsletter No.1
November 2020

rpsgroup.com

BACKGROUND TO THE SCHEME

Glenties (Na Gleannta) is a town that lies on the banks of the Stracashel River and Gortnamucklagh River, located to the north west of the Blue Stack Mountains in south west Donegal. The Stracashel River and Gortnamucklagh River are tributaries of the Owenea River that flows to the south of Glenties.

Glenties has had a history of flooding with the most recent significant flood occurring in August 2019. It is thought that this event was due to the rivers around Glenties exceeding their banks. The flood event in 2019 resulted in extensive flooding to the GAA club grounds (Naomh Conaill). The Clos Naomh Conaill housing estate has been subject to recurring flooding but Donegal County Council have recently undertaken works to the drainage network to resolve this flooding.

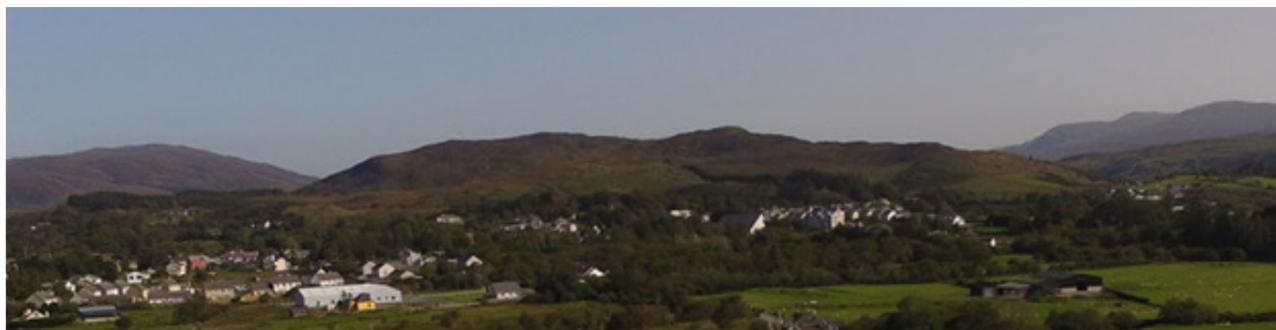

The OPW's Flood Risk and Management Study, completed prior to the 2019 floods, identified Glenties as a town which would benefit from a flood relief scheme, the need for such a scheme has been brought into focus by the events of August 2019.

As part of the Government's National Development Plan 2018-2027, €1 billion has been committed to the development of flood relief measures across Ireland. As part of this commitment, a steering group was established between the Office of Public Works (OPW) and Donegal County Council to progress a flood relief scheme to alleviate the risk of flooding for Glenties. In July 2020, RPS were appointed Engineering and Environmental Consultants to develop a flood relief scheme that is technically, socially, environmentally and economically acceptable for Glenties.

The project team will identify, design and implement a flood relief scheme that is technically, socially, environmentally and economically acceptable.

WHAT STAGE IS THE SCHEME AT?

Since appointment RPS has been working to ensure that all of the works planned are based on the most accurate and up to date information. They have been reviewing all relevant sources of information, procuring a contractor to undertake a detailed river and terrain survey; and analysing how the rivers react to rainfall events in their respective catchments. RPS has also developed a website to provide up-to date information throughout the duration of the project.

OUTLINE SCHEME PROGRAMME

Outline Glenties Scheme Programme

	Activity	2020	2021	2022	2023	2024	2025
Stage 1	Data Collection and surveys	█					
	Hydrological Analysis	█	█				
	Hydraulic Analysis		█	█			
	Scheme analysis & development		█	█			
Stage 2	Planning			█	█		
Stage 3	Detailed design of Scheme				█	█	
Stage 4	Construction works					█	█
Stage 5	Scheme Operational						█

Timelines provided as current best estimate, but are subject to revision.

NEXT STEPS

Data Collection: RPS are interested in receiving photos, videos, sketches or any other relevant information in regards to previous floods from those who have experienced it first-hand, particularly from 2015 onwards. The information provided will help us to refine our river model and the design of the flood relief scheme. If you have any information which could be of use, please contact us.

Public Consultation: Due to the ongoing COVID-19 public health emergency an Opening Public Consultation Day (PCD) will not be held in person. Instead Opening Public Consultation will be via an online consultation portal (<https://countydonegalfrs.ie/glentiesfrs/index.php/opening-public-consultation>) with postal drops commencing on 9th November 2020. The Public Consultation portal will remain open for the following six weeks.

The purpose of the event will be to introduce the project team, present and receive comments on flood risk in the area, particularly flood events that have occurred since the Catchment Flood Risk Assessment and Management (CFRAM) Study was undertaken, and to discuss scheme options and environmental constraints in managing the flood risk from your perspective.

Surveys: Appointment of a survey contractor to record up to date river channel and floodplain levels to be used in design.

Hydrological Analysis: Analysis of river and rainfall data including recent events to be used in design.

Environmental Constraints Study: This study will be completed in conjunction with the engineering design and will identify environmental constraints within the study area. Topics within the Constraints Study Report will include:

- **Population, Human Health**
- **Biodiversity**
- **Land, Soil, Water, Air and Climate**
- **Material Assets, Cultural Heritage and the Landscape**
