WHAT STAGE IS THE PROJECT AT?

The Glenties FRS Steering Group (comprising of the OPW, Donegal County Council and RPS) are continuing to ensure that all of the works planned are based on the most accurate and up to date information. All project information remains available on the project website www.countydonegalfrs.ie/glenties including contact details for the team.

Surveys capturing the data needed to build an up to date computer model of the Owenea, Stracashel and Gortnamucklagh Rivers, existing defences and floodplains in the area are complete.

Using this data we have built a computer model to represent the Owenea, Stracashel and Gortnamucklagh Rivers. We have added river flows and water level inputs to drive the model and replicate flood conditions, for both past and future predicted (design) events. Our team has fine-tuned the model to check that it is as accurate as possible. This made use of the data (photographs and videos) of past flood events provided by local residents, businessowners and stakeholders to ensure the closest representation of events which took place on the ground in Glenties.

We are now assessing the level of flood risk to decide what (if any) flood risk management measures are appropriate for Glenties. The list will be inclusive of, but not limited to those outlined in North Western Flood Risk Management Plan (www.floodinfo.ie) and will include the consideration of do nothing and minimal intervention measures as well as Nature based Catchment Measures. All measures are being screened, identifying those that could be progressed for a more detailed assessment. A technical workshop to discuss scheme analysis and development was held in early November 2021 and was attended by the Glenties FRS Steering Group.

The RPS Environmental Team completed the Environmental Constraints Study report in late August, which considers the key environmental issues which may be impacted by, or impose constraints on, the flood scheme. The report considers Biodiversity, Flora and Fauna, Soils and Geology, Archaeology, Architectural and Cultural Heritage, Land Use and Material Assets, Landscape and Visual Impact, in addition to Population and Human Health. The report will be available on the project website soon.

Further detailed environmental surveys have taken place since August including the completion of ecological surveys that are seasonally constrained, e.g. aquatic ecology and fisheries surveys. These specialist surveys build on the initial baseline surveys already undertaken in 2020 and to date in 2021.

Fresh Pearl Mussel survey in Owenea River, Glenties

IMPACT OF CORONAVIRUS (COVID-19)

The project team have worked hard to ensure that all activities on the project are in compliance with the public health guidance on Coronavirus whilst at the same time trying to reduce negative impacts on the project programme. The Glenties FRS Steering Group (comprising of the OPW, Donegal County Council and RPS) have continued to meet regularly using video conferencing. Progressing flood relief schemes has been deemed as an essential service by local authorities.

OUTLINE SCHEME PROGRAMME

Activity		2020	2021	2022	2023	2024	2025
Stage 1	Data Collection and surveys	[Blue bar]					
	Hydrological Analysis	[Blue bar]		[Green bar]			
	Hydraulic Analysis		[Blue bar]	[Green bar]			
	Scheme analysis & development		[Blue bar]	[Green bar]			
Stage 2	Planning			[Green bar]			
Stage 3	Detailed design of Scheme				[Green bar]		
Stage 4	Construction works					[Green bar]	
Stage 5	Scheme Operational						[Green bar]

Timelines provided as current best estimate, but are subject to revision.

NEXT STEPS

Data Collection: All outstanding data sets in relation to Stage I of the Project have been received.

Surveys: The detailed surveys have been completed. Final data has been provided to the Project Team and is being reviewed for use in the hydraulic model. RPS are currently looking at whether further surveys are needed to inform the preliminary design of a scheme.

Hydrological Analysis: The design flows and water levels which are used within the models to simulate flooding have been finalised, and the Project Team are currently preparing the Draft hydrology report.

Hydraulic Analysis: The hydraulic model has been calibrated and validated using data from historical flood events to ensure that it provides an accurate representation of the flooding mechanisms. The model will now be used to assess and compare various engineered options which will reduce the flood risk in Glenties.

Option Development: A list of all potential flood risk management measures which may be applicable at Glenties is currently being produced. These will be screened such that so that measures which could be technically and economically viable, socially and environmentally acceptable are taken forward for detailed assessment.

Environmental Assessment: Further surveys are proposed in the coming months including protected species surveys, archaeological and architectural surveys.
